

## **Job description: UX/UI (front end) developer**

**Job purpose:** To combine design and development to create a positive and cohesive website experience for our organisers and their customers.

### **Duties and responsibilities**

- Carry out user research to find out our users' digital habits and behaviour and translating this into UI and UX strategies based on our goals
- Creating wireframes, concepts and mockups that lead to intuitive user experiences
- Designing and creating mockups and user journeys for a wide range of devices, including desktops, mobiles, and tablets
- Designing, building, and maintaining JavaScript, HTML, and CSS code
- Fixing UI bugs and glitches
- Understanding the business and proposing solutions adapted to the business requirements
- Working with our teams to improve and refine our products

### **Key skills**

- Experience of working with the core UX principles, philosophies and methodologies
- Proven experience in using HTML and CSS well, and an active interest in constantly improving these skills
- A good eye for, and understanding of, modern web design
- A good understanding of 'the big picture' and how our organisers and their customers interact with our website
- Good HTML and CSS skills and active interest in constantly improving these
- Creativity
- Strong interpersonal and communication skills: you'll be a team player who's able to actively listen to what's needed and turn this into web content
- Desire to stay on top of the latest trends in software development and website design
- Excellent time management skills and ability to meet tight deadlines and prioritise well
- Excellent attention to detail
- Self-motivated to come up with suggestions of your own

**Reports to:** Chief Technology Officer

**Direct reports:** None
